Conventions

The following conventions are used in this manual:

Screen messages	Denotes actual messages that appear
	on screen.
	011 0010011.
NOTE	Gives bits and pieces of additional information related to the current topic.
WARNING	Alerts you to any damage that might result from doing or not doing specific actions.
CAUTION	Gives precautionary measures to avoid possible hardware or software problems.
IMPORTANT	Reminds you to do specific actions relevant to the accomplishment of procedures.

Preface

Before using this information and the product it supports, please read the following general information.

- 1. This Service Guide provides you with all technical information relating to the BASIC CONFIGURATION decided for Acer's "global" product offering. To better fit local market requirements and enhance product competitiveness, your regional office MAY have decided to extend the functionality of a machine (e.g. add-on card, modem, or extra memory capability). These LOCALIZED FEATURES will NOT be covered in this generic service guide. In such cases, please contact your regional offices or the responsible personnel/channel to provide you with further technical details.
- 2. Please note WHEN ORDERING FRU PARTS, that you should check the most up-to-date information available on your regional web or channel. If, for whatever reason, a part number change is made, it will not be noted in the printed Service Guide. For ACER-AUTHORIZED SERVICE PROVIDERS, your Acer office may have a DIFFERENT part number code to those given in the FRU list of this printed Service Guide. You MUST use the list provided by your regional Acer office to order FRU parts for repair and service of customer machines.

System Specifications

Overview

The Aspire 3300S supports $Intel^{\otimes}$ Pentium 4 (Willamette 478/Northwood) Flip Chip-Pin Grid Array 2 processor (FC-PGA2) based Micro ATX, IBM PC/AT compatible system with PCI/AGP bus.

Features

Performance

	Intel Pentium® IV processor with Intel NetBurst™ micro-architecture and integrated 256KB/512KB on-die L2 cache memory in Flip Chip 2 (FC)-mPGA 478 socket form factor, with supporting CPU clock up to 2.4GHz+.
	System Front Side bus speed:400 MHz.
	Maximum of 2GB DDR RAM within 2 DIMM sockets.
	Integrated LAN Controller.
	3.5-inch and 5.25-inch floppy disk drives.
	CD-ROM/DVD-ROM /CD-RW drives
	1x/2x/4x AGP slot
	High capacity, Enhanced-IDE hard disk
	Power management features
	CPU SMM (System Management Mode)
	Onboard PCI master enhanced local bus IDE (Embedded in 82801BA chipset).
	□ PIO mode 4
	☐ Multiword DMA Mode 2
	☐ Ultra DMA/33, Ultra DMA/66 & Ultra DMA/100 modes
	Plug-and-Play (PnP) feature
	ACPI 1.0 b Compliant Power management and Configuration Support
	Software shutdown for Windows 95/98/ME/2000/XP
	Hardware monitor function
Multimed	lia
	128-bit graphics accelerator installed in the AGP Pro card slot
	An additional AGP card 1.5V slot, supports 2X and 4X
	Cathode-ray tube(CRT) support
	Liquid crystal display (LCD) support(optional)
	3-D quality audio system via onboard audio controller
	Audio-in/Line-in, Audio-out/Line-out, Headphone-out, Mic-in, and Game/MIDI interface
	ne system has dual RJ-11 phone jacks for line and phone on Modem card (option). One ne jack and one speaker jack on FPIO board.
Connect	ivity
	One AGP and three PCI slots
	One CNR slot
	USB and PS/2 compatible mouse and keyboard interfaces
	Two high-speed NS 16C550-compatible serial ports
	One multi-mode parallel port
	Four USB ports (available on front and rear panels) with Plug and Play function
	High-speed 56K V9.0 fax/data/voice PCI modem (optional)
	One RJ45 connector supports IEEE 802./802.3u 10Base-T/100Base-TX-compatible network with remote wake-up function

Expansion

- □ 3 PCI slots + 2 DIMM slots + 1 AGP slot
- Upgradeable memory and hard disk

Human-centric design and ergonomics

- □ Slim desktop form factor
- ☐ Separate computer stand and rubber stands for quick and easy positioning
- □ Accessible I/O ports
- ☐ Smooth and stylish design
- □ Low emission and low radiation

Front Panel Aspire 3300S

The computer's front panel consists of the following:

Label	Icon	Color	Description
1			Floppy drive light-emitting diode (LED)
2			3.5-inch floppy drive
3			Floppy drive eject button
4	သ		CD-ROM/DVD-ROM/CD-RW Headphone/Earphone jack.
5			Volume control tuner
6			CD-ROM/DVD-ROM/CD-RW LED
7			CD-ROM/DVD-ROM/CD-RW tray
8			CD-ROM/DVD-ROM/CD-RW emergency eject hole
9	_		Stop/Eject button
10	•←	Black	USB ports
11	<i>/</i>	Pink	Microphone-in port (front)*
12	n	Lime	Headphone-out port

Label	Icon	Color	Description
13			Hard disk drive activity LED
	=		
14			LAN Activity LED
	##>		
15			Power LED
	*		
16			Power switch
	Φ		

NOTE: *The system has two microphone-in ports (front and rear). However, you cannot use both of them at the same time. The default setting for your system enables the microphone-in port in front and disables the one at the back.

Rear Panel Aspire 3300S

Label	Icon	Color	Description
1			Power supply
2			Voltage selector switch
3			Keyhole
4		Green	PS/2 mouse port
	_		
	ð		
)		
5		Gray	Network port
	<u>₽</u>		
6	_	Burgundy	Parallel/Printer port
7			O a ser (MID) a a st
7	•	Gold	Game/MIDI port
	db		
8			VGA port*
9		Black	Handset/telephone line ports (optional)
	<u></u>		
	٠		
	~		
10			Power cord socket

Label	Icon	Color	Description
11	******	Purple	PS/2 keyboard port
12	•	Black	USB ports
13	[OIOI]	Teal or Turquoise	Serial port
14	((-)) -	Lime	Audio-out/Line-out jack
15	((-1))	Light blue	Audio-in/Line-in jack
16	No.		Microphone-in port (rear)**
17			Expansion slots

NOTE: * The CRT monitor port is automatically disabled when an add-on VGA card is installed into the system. Connect the monitor to the VGA port instead.

^{**} The system has two microphone-in ports (front and rear). However, you can not use both of them at the same time. The default setting for your system enables the microphone-in port in front and disables the one at the back.

System Block Diagram (Aspire 3300S)

Main Board Layout (Aspire 3300S)

Component	Function
ATX Power Supply/JPW1	ATX power connectors
JKBMS1	Mouse/keyboard connector
USB Connectors	Connecting to USB devices
COM A & COM B	Serial port connector
VGA DB 15-pin	Connecting to VGA monitor
LAN Jack (optional)	Connecting to LAN devices
LPT1	Parallel port connector
FDD1	Floppy disk drive connector
J8	Chassis intrusion switch connector

Component	Function
IDE 1~IDE 2	Hard disk connector
JCD1/JAUX1/JMD1	CD/AUX/Modem-in connectors
CPUFA/SYSFA	Fan power connectors
JFP1/JFP2	Front panel connectors
JAUD	Front panel audio connector
JUSB1/JUSB2	USB front connector
JIR1	IrDA infrared module connector
JBAT1	Clear CMOS jumper
AGP Slot	Connecting to AGP cards
PCI Slot	Connecting to expansion cards
CNR Slot	Connecting to expansion cards

Keyboard

The keyboard has full-sized keys that include separate cursor keys, two Windows keys, and twelve function keys.

No.	Component	Description
1	Programmable keys	Help you directly access a URL (Web site) or launch any program, file, or application in your system. The fifth key is set to launch the media player. To configure the settings of each key, right-click on the Magic Keyboard icon located on your Windows desktop.
2	Internet/Suspend keys	Consist of three buttons: • Email : launches the email application that came bundled with your system. • Www • Web browser : launches the browser application that came bundled with your system. • Suspend/Resume : puts the system to sleep when
3	Multimedia keys	pressed. To wake up the system press it again. Allow you to do the following: Play/Pause button

No.	Component	Description	
4	Volume control/Mute knob	Controls the speaker volume. Turn it clockwise or counterclockwise to adjust the volume. Press it to toggle between mute and sound.	
5	Scroll Lock	When activated, the screen moves one line up or down when you press the up arrow or down arrow respectively. Take note that [may not work with some applications.	
6	Num Lock	When activated, the keypad is set to numeric mode, i.e., the keys function as a calculator (complete with arithmetic operators such as +, -, * and /).	
7	Cursor keys	Also called arrow keys, let you move the cursor around the screen. They serve the same function as the arrow keys on the numeric pad when the] is toggled off.	
8	Application key	Opens the applications context menu (same function as clicking the right button of the mouse).	
9	Windows logo key	Start button. Combinations with this key perform special functions, such as: Windows + Tab: Activates the next Taskbar button Windows + E: Explore My Computer Windows + F: Find Document Windows + M: Minimize All Shift + Windows + M: Undo Minimize All Windows + R: Displays Run dialog box	
10	Caps lock	When activated, all alphabetic characters typed appear in uppercase (same function as pressing j + <letter>).</letter>	
11	Function keys	Access most of the computer's controls like screen brightness, volume output and the BIOS utility.	

Hardware Specifications and Configurations

Processor

Item	Specification
Туре	Intel® Pentium IV processors with mPGA478 package
Slot	Socket mPGA478
Speed	Internal : 1.5~2.4GHz+
	External: 400MHZ Data Bus Frequency
Minimum operating speed	0 MHz (If Stop CPU Clock in Sleep State the BIOS Setup is set to Enabled.)
Voltage	Processor voltage can be detected by the system without setting any jumper.

BIOS

Item	Specification
BIOS code programmer	Award
BIOS version	V6.0
BIOS ROM size	2MB
Support protocol	PCI 2.1, APM1.2, DMI 2.00.1, E-IDE, ACPI 1.0, ESCD 1.03, ANSI ATA 3.0, PnP 1a, Bootable CD-ROM 1.0, ATAPI
Boot from CD-ROM feature	Yes
Support to LS-120 drive	No
Support to BIOS boot block feature	Yes

NOTE: The BIOS can be overwritten/upgraded using the FLASH utility (AWDFLASH.EXE).

BIOS Hotkey List

Hotkey	Function	Description
DEL	, ,	Press while the system is booting to enter BIOS Setup Utility.

This section has two table lists, system memory specification and the possible combinations of memory module.

System Memory

Item	Specification
Memory socket number	2 slots (4 banks)
Support memory size per socket	64MB~1GB
Support maximum memory size	2GB
Support memory type	DDR SDRAM
Support memory speed	266MHz(PC2100)
Support memory voltage	2.5V
Support memory module package	184 -pin DIMM
Support to parity check feature	Yes
Support to Error Correction Code (ECC) feature.	Yes
Memory module combinations	You can install memory modules in any combination as long as they match the Memory Combination specifications.

Memory Combinations

Slot	Memory Module	Total Memory
Slot 1 (Bank 0 & Bank 1)	64MB, 128MB, 256MB, 512MB, 1GB	64MB~1GB
Slot 2 (Bank 0 & Bank 1)	64MB, 128MB, 256MB, 512MB, 1GB	64MB~1GB
Maximum System Memory Supported		64MB~2GB

Cache Memory

Item		
First-Level Cache Configurations		
Cache function control	Enable/Disable by BIOS Setup (Advanced options)	
Second-Level Cache Configurations: Below information is only applicable to system with installed Pentium 4 processor.		
L2 Cache RAM size	Pentium IV processor: 256 KB	
L2 Cache RAM speed	The same with the processor core clock frequency	
L2 Cache function control	Enable/Disable by BIOS Setup	

Video Interface

Item	Specification
Video controller resident bus	AGP bus
Video interface support	1x / 2x / 4x AGP Signaling and 2x / 4x Fast Writes
	The AGP buffers operate only 1.5V mode

Audio Interface

Item	Specification
Audio controller	SiS961
Audio controller resident bus	AC'97 link
Audio function control	Enable/disable by BIOS Setup
Mono or stereo	Stereo
Resolution	16 bits
Compatibility	AC'97 2.1 compliant
	Sound Blaster Pro compatible
	Mixed digital and analog high performance chip
	Enhanced stereo full duplex operation
	High performance PCI audio accelerator
	Full native DOS games compatibility
	High-Quality ESFM music synthesizer
	MPU-401(UART mode) interface for wavetable synthesizers and MIDI devices
	Integrated dual game port
	Meets PC 97/PC98 and WHQL specifications
Music synthesizer	Yes
Sampling rate	44.1 KHz
MPU-401 UART support	Yes
Microphone jack	Supported
	On audio-I/O board (connects via CN6)
Headphone jack	Supported On audio-I/O board (connects via CN6)

IDE Interface

Item	Specification
IDE controller	SiS961
IDE controller resident bus	PCI bus
Number of IDE channel	2 onboard: 40-pin hard disk drive connector,
Support IDE interface	E-IDE (up to PIO mode 4 and Ultra DMA/33, Ultra DMA/66 and Ultra DMA/100 mode 2) ANSIS ATA rev.4.0 ATAPI
Support bootable CD-ROM	Yes

Floppy disk drive Interface

Item	Specification
Floppy disk drive controller	LPC Super I/O
Floppy disk drive controller resident bus	LPC
Support FDD format	360KB, 720KB, 1.2MB, 1.44MB, 2.88MB; 3-mode

Parallel Port

Item	Specification
Parallel port controller	LPC Super I/O
Parallel port controller resident bus	LPC
Number of parallel ports	1
Support ECP/EPP	SPP/ECP / EPP 1.7 & 1.9
Connector type	25-pin D-type female connector
Parallel port function control	Enable/disable by BIOS Setup
Optional ECP DMA channel (in BIOS Setup)	DMA channel 1 DMA channel 3
Optional parallel port I/O address (via BIOS Setup)	378h 278h
Optional parallel port IRQ (via BIOS Setup)	IRQ5 IRQ7

Serial Port

Item	Specification
Serial port controller	LPC Super I/O
Serial port controller resident bus	LPC
Number of serial port	2
Serial ports location	COM1, COM 2
16550 UART support	Yes
Connector type	10-pin connector
Optional serial port I/O address (via BIOS Setup)	3F8h, 2F8h, 3E8h, 2E8h
Optional serial port IRQ (via BIOS Setup)	4, 3

Modem

Item	Specification
Fax modem data baud rate (bps)	14.4K bps
Data modem data baud rate (bps)	56K bps
Voice modem	Yes
Modem connector type	Not Applicable
Full duplex	Not applicable

USB Port

Items	Specifications
Universal HCI	USB 1.1
USB Class	Support legacy keyboard for legacy mode

Memory Address Map

Address	Size	Function
000000 - 07FFFF	512KBytes	Host Memory
080000 - 09FFFF	128KBytes	Host/PCI Memory
0A0000 - 0BFFFF	128KBytes	PCI/ISA Video Buffer Memory
0C0000 - 0C7FFF	32KBytes	Video BIOS Memory
0C8000 - 0DFFFF	96KBytes	ISA Card BIOS & Buffer Memory
0E0000 - 0EFFFF	64KBytes	BIOS Extension Memory
		Setup and Post Memory
		PCI Development BIOS
0F0000 - 0FFFFF	64KBytes	System BIOS Memory
100000 - UPPER LIMIT		Main Memory
UPPER LIMIT - 4GBytes		PCI Memory

Note: UPPER LIMIT means the maximum size of installed memory.

The Main Memory Maximum size are 768M Bytes.

Onboard Device ID & IRQ Map

Device	AD#	IDSEL	Route Reg.	Mask
Intel 845 MCH	AD11	00h		
P2P	AD30	13h		
(Func.0) ICH2 (LPC)	AD31	14h

Main Board Major Chips

Item	Controller
North Bridge	SiS 650
South Bridge	SiS 961
Super I/O controller	ITE IT8705F
Audio controller	SiS961
LAN controller	SiS961
HDD controller	SiS961
Keyboard controller	SiS961
RTC	SiS961

Environmental Requirements

Item	Specifications
Temperature & Humidity	•
Operating	+10 to +45°C
Non-operating	-10 to +60°C
Non-operating	-20 to +60°C (Storage package)
Humidity	
Operating	20% to 80% RH, non-condensing
Non-operating	20% to 80% RH, non-condensing (Unpacked)
Non-operating	20% to 80% RH, non-condensing (Storage package)
Vibration	·
Operating	5~16.2Hz 0.388mm(peak to peak) 16.2~250Hz 0.2G
Sweep Rate Direction Test Cycles	1 octave/minute X,Y,Z axis 2 cycles per axis
Non-operating (Packed)	5~27.1Hz 0.6G 27.1~50Hz 0.44mm(peak to peak) 50~500Hz 2.0G
Sweep rate Direction Test Cycles	0.5 octave/minute X,Y,Z axis 4 cycles per axis

Mechanical Specifications

Item	Specification
Weight One 3.5 FDD and one 3.5 HDD (without packing)	Depends on local configuration

Switching Power Supply

Input Frequency	Frequency Variation Range
50Hz	47Hz to 53Hz
60Hz	57Hz to 63Hz

Input Voltage	Variation Range
100 - 120 VRMS	90-132 VRMS
200 - 240 VRMS	180-264 VRMS

Input Current	Measuring Range
3A	180 - 264 VRMS

(This is for 160W power supply)

Output Requirements	Regulation	Current Rating(Max)
+5V	+-5%	8A
+12V	+-5%	8A
-12V	+-10%	0.3A
+3.3	+-5%	10A
-5V	+-10%	0.2A
+5V	+-5%	3A

NOTE: 1. +3.3V and +5V total output power can't exceed 80W.

Power Management Functions

Device St	andby	Mode
-----------	-------	------

		Independent power management timer for hard disk drive devices (0-15 minutes, time step=1 minute).
		Hard disk drive goes into Standby mode (for ATA standard interface).
		Disable V-sync to control the VESA DPMS monitor.
		Resume method: device activated (Keyboard for DOS, keyboard & mouse for Windows).
		Resume recovery time: 3-5 sec.
Global S	Stand	by Mode
		Global power management timer (2-120 minutes, time step=10 minute).
		Hard disk drive goes into Standby mode (for ATA standard interface).
		Disable H-sync and V-sync signals to control the VESA DPMS monitor.
		Resume recovery time: 7-10 sec.
Suspend	d Mo	de
		Independent power management timer (2-120 minutes, time step=10 minutes) or pushing external switch button
		CPU goes into SMM.
		CPU asserts STPCLK# and goes into the Stop Grant State.
		LED on the panel turns amber color.
		Hard disk drive goes into SLEEP mode (for ATA standard interface).
		Disable H-sync and V-sync signals to control the VESA DPMS monitor.
		Return to original state by pushing external switch button.
Suspend	d to F	RAM
		The system context is maintained in system memory
		Power is shut to non-critical circuits.
		Memory is retained, and refreshes continually.
		All clocks shut except RTC.
		Return to original state by pushing external switch button & "PME" events at ACPI mode.

System Utilities

Most systems are already configured by the manufacturer or the dealer. There is no need to run Setup when starting the computer unless you get a Run Setup message.

The Setup program loads configuration values into the battery-backed nonvolatile memory called CMOS RAM. This memory area is not part of the system RAM.

NOTE: If you repeatedly receive Run Setup messages, the battery may be bad/flat. In this case, the system cannot retain configuration values in CMOS.

Before you run Setup, make sure that you have saved all open files. The system reboots immediately after you exit Setup.

Chapter 2 24

Entering Setup

Power on the computer abd the system will start POST (Power On Self Test)prosecc. When the message of "Press DEL to enter SETUP" appears on the screen, press the key of [Delete] to enter the setup menu.

NOTE: If the message disappears before you respond and you still wish to enter Setup, restart the system by turning it OFF and On. You may also restart the system by simultaneously pressing [Ctrl+Alt+Delete].

The Setup Utility main menu then appears:

rne anot	nand line at the bottom of the menu tells you now to move within a screen and from one screen to
	To select an option, move the highlight bar by pressing 🗖 or 🗓 then press ENTER.
	To change a parameter setting, press ☐ or ☐ until the desired setting is found.
	Press to return to the main menu. If you are already in the main menu, press again to exit Setup.

The parameters on the screens show default values. These values may not be the same as those in your system.

The grayed items on the screens have fixed settings and are not user-configurable.

NOTE: Due to the application of a new version of BIOS Setup program, you may find the BIOS menu is largely different from the former models. However, you will soon find out that this version is much more compact than the former ones.

Chapter 2 26

Product Information

The screen below appears if you select Product Information from the main menu:

The Product Information menu contains general data about the system, such as the product name, serial number, BIOS version, etc. These information is necessary for troubleshooting (maybe required when asking for technical support).

Product Name	AcerPower Sd	Item Help
System S/N Main Board ID	J86M	Menu Level ▶
Main Board S/N	IIC O	
System BIOS Version SMBIOS Version	V6.0 2.3	
System BIOS ID	R01-B1	
BÍOS Release Date	Feb 20, 2002	

The following table describes the parameters found in this menu:

Parameter	Description	
Product Name	Displays the model name of your system.	
System S/N	Displays your system's serial number.	
Main Board ID Displays the main board's identification number.		
Main Board S/N Displays your main board's serial number.		
System BIOS Version Specifies the version of your BIOS utility.		
SMBIOS version	The System Management Interface (SM) BIOS allows you to check your system hardware components without actually opening your system. Hardware checking is done via software during start up. This parameter specifies the version of the SMBIOS utility installed in your system.	
System BIOS ID	Specifies the version ID of the BIOS utility.	
BIOS Release Date	Displays the release date of the BIOS utility.	

Chapter 2 28

Standard CMOS Features

Select Standard CMOS Features from the main menu to configure some basic parameters in your system.

The following screen shows the Standard CMOS Features menu:

The following table describes the parameters found in this menu. Settings in **boldface** are the default and suggested settings.

Parameter	Description	Options
Date	Lets you set the date following the weekday- month-day-year format	Weekday: Sun, MonSat Month: Jan, FebDec. Day: 1 to 30 Year: 1980 to 2079
Time	Lets you set the time following the hour-minute- second format	Hour: 0 to 23 Minute: 0 to 59 Second: 0 to 59
IDE Primary Channel Master	Allows you to configure the hard disk drive connected to the master port of IDE channel 1. To enter the IDE Primary Master setup, press [Enter]. The IDE CD-ROM is always automatically detected.	IDE Device Model Number: None
IDE Primary Channel Slave	Allows you to configure the hard disk drive connected to the slave port of IDE channel 1. To enter the IDE Primary Slave setup, press [Enter]. The IDE CD-ROM is always automatically detected.	IDE Device Model Number: None

Parameter	Description	Options
IDE Secondary Channel Master	Allows you to configure the hard disk drive connected to the master port of IDE channel 2. To enter the IDE Secondary Master setup, press [Enter]. The IDE CD-ROM is always automatically detected.	IDE Device Model Number: None
IDE Secondary Channel Slave	Allows you to configure the hard disk drive connected to the slave port of IDE channel 2. To enter the IDE Secondary Slave setup, press [Enter]. The IDE CD-ROM is always automatically detected.	IDE Device Model Number: None
Drive A	Allows you to configure your floppy drive A.	1.44 MB, 3.5-inch None 360 KB, 5.25-inch 1.2 MB, 5.25-inch 720 KB, 3.5-inch 2.88 MB, 3.5-inch
Drive B	Allows you to configure your floppy drive B.	1.44 MB, 3.5-inch None 360 KB, 5.25-inch 1.2 MB, 5.25-inch 720 KB, 3.5-inch 2.88 MB, 3.5-inch
Floppy 3 Mode Support	Floppy 3 is the standard Japanese floppy drive mode. Supported by the BIOS, the selected diskette drive can read 720KB, 1.2MB and 1.44MB on a 3.5" diskette.	Disabled, Enabled.
Video	This item specifies the type of video card in use. The default setting is VGA/EGA. Since current PCs use VGA only, this function is almost useless and may be disregarded in the future.	VGA/EGA CGA40 CGA80 Mono
Halt On	This parameter enables you to control the system stops in case of Power On Self Test errors (POST).	All Errors No Errors All but Keyboard All but Diskette All by Disk/Key
Base Memory	Refers to the option of memory that is available to standard DOS programs. DOS systems have an address space od 1MB, but the top 384KB (called high memory) is reserved for system use. This leaves 640 KB of conventional memory. Everything above 1MB is either extended or extended memory.	
Extended Memory	Memory above and beyond the standard 1MB of base memory that DOS supports. Extended memory is only available in PCs with an Intel 80286 or later microprocessor. Extended memory is not configured in any special manner and is therefore unavailable to most DOS programs. However, MS Windows and OS/2 can use extended memory.	
Total Memory	Total based and extended memory, and I/O ROM 384KB available to the system.	

Chapter 2 30

IDE Primary/Secondary Channel Master/Slave Setup

The following screen appears if you select any of the IDE drive parameters:

IDE HDD Auto-Detection	[Press Enter	1	Item Help
IDE Primary Master Access Mode	[Auto] [Auto]		Menu Level ▶▶ To auto-detect the
Capacity	0 MB		HDD's size, head or this channel
Cylinder Head Precomp Landing Zone Sector	9 9 9		
.→+:Move Enter:Select F5:Previous Va	+/-/PU/PD:Value	F10:Save	ESC:Exit F1:General He

The following table describes the parameters found in this menu. Settings in **boldface** are the default and suggested settings.

Parameter	Description	Options
IDE HDD Auto- Detection	Auto-detects your hard disk drive	Press [Enter]
IDE Primary Master	Display the type of device installed.	Auto
		None
		Manual
Access Mode	Selects the HDD access mode	Auto
		Large
		LBA
		CHS
Capacity	Shows the size of your HDD in MB	xxxxx MB
Cylinder	Shows your hard disk's numberof cylinders	0 to 65535
Head	Shows your hard disk's number of heads	0 to 255
Precomp	Selects the precomp number for old HDD parking	0 to 65535
Landing Zone	Selects the Land Zone number for old HDD parking	0 to 65535
Sector	Shows your hard disk's number of sectors	0 to 255

Advanced BIOS Features

The following screen shows the Advanced BIOS Features:

The following table describes the parameters found in this menu. Settings in **boldface** are the default and suggested settings.

Parameter	Description	Options
Virus Warning	Allows you to set the virus warning feature for IDE Hard Disk boot sector protection. If the function is enabled and any attempt to write data into this area is made, BIOS will display a warning message on screen and beep.	Enabled Disabled
Quick Power On Self Test	This parameter speeds up POST by skipping some items that are normally checked.	Enabled Disbaled
Hard Disk Boot Priority		
First/Second/Third Boot Device	The items allow you to set the sequence of boot device where BIOS attempts to load the disk operating system.	Floppy, LS120, HDD-0, SCSI, CDROM, HDD-1, HDD-2, HDD-3, ZIP, LAN, Disabled (Disable this sequence). The sequence following the order of HDD, Floppy and CD-ROM is recommended.
Boot Other Device	This parameter allows you to specify the system boot up search sequence.	Enabled Disbaled
Swap Floppy Drive	Setting to Enabled will swap floppy drive a: and b:.	Enabled Disabled
Boot Up Floppy Seek	Setting to Enabled will make BIOS seek floppy drive a: before booting the system.	Enabled Disabled

Parameter	Description	Options
Boot Up NumLock Status	Sets the NumLock status when the system is powered on. Setting to On will turn on the NumLock key when the system is powered on. Setting to Off will allows users to use the arrow keys on the numeric keypad.	On Off
Gate A20 Option	This item is to set the Gate A20 status. A20 refers to the first 64KB of extended memory. When the default value Fast is selected, the Gate A20 is controlled by port 92 or chipset specific method resulting in faster system performance. When Normal is selected, A20 is controlled by a keyboard controller or chipset hardware.	Fast Normal
Typematic Rate Setting	This item is used to enable or disable the typematic rate setting including Typematic Rate and Typematic Deplay.	Enabled Disabled
Typematic Rate	After Typematic Rate Setting is enabled, this item allows you to set the rate (characters/second) at which at keys are accelerated.	Settings: 6,8,10,12,15,20,24 and 30.
Typematic Delay	This item allows you to select the delay between when the key was first pressed and when the acceleration begins	Settings: 250, 500, 750 and 1000.
Security Option	Specifies the type of BIOS password protection that is implemented. Setup means that the password prompt appears only when end users try to run Setup. System means that a password prompt appears every time when the computer is powered on or when end users try to run Setup.	Setup System
APIC Mode	This field is used to enable or disable the APIC (Advanced Programmable Interrupt Controller). Due to compliance with PC2001 design guide, the system is able to run in APIC mode. Enabling APIC mode will expand available IRQ resources from the system.	Enabled Disabled
MPS Version Control for OS	This field allows you to select which MPS (Multi-Processor Specification) version to be used for the operating system. You need to select the MPS version supported by your operating system. To find out which version to use, consult the vendor of your operating system.	1.4 1.1

Advanced Chipset Features

The advanced cipset features setup option is used to change the values of the chipset registers. These registers control most of the system options in the computer.

NOTE: Change these settings only if you are familiar with the chipset.

CMC	CMOS Setup Utility - Copyright (C) 1984-2001 Award Software Advanced Chipset Features					
	d DRAM Control	[Press Enter]				
	Hole at 15M-16M erture Size	[Disabled] [64MB]		Menu Le	vel ►	
†↓→←:Move	Enter:Select + F5:Previous Val			ESC:Exit lt Setting	F1:General	l Hel

Advanced DRAM Control

Press [Enter] to enter the sub-menu and the following screen appears:

CMOS Setup Utility - Copyright (C) 1984-2001 Award Software Advanced DRAM Control							
	Performance	[Normal Mode [2.5T]]		Item H	le l p	
ons hat	ency Setting			Menu Le	vel	₩	
t↓→←:Mave	Enter:Select F5:Previous V	+/-/PU/PD:Value	F10:Save	ESC:Exit ult Settin		eneral	He l

The following table describes each parameter under the sub-menu. Settings in **boldface** are the default and suggested values.

Parameter	Description	Options
System Performance	The DRAM timing is controlled by the DRAM Timing Registers. The timings programmed into this register are dependent on the system design. Slower rates may be required in certain system designs to support loose layouts or slower memory.	Normal Mode Safe Mode Fast mode Turbo Mode Ultra Mode
CAS Latency Setting	When synchronous DRAM is installed, the number of clock cycles of CAS latency depends on the DRAM timing.	2T, 2.5T , 3T

The other two parameters under the Advanced Chipset Features are presented below. Settings in **boldface** are the deafult and suggested values.

Parameter	Description	Options
	You can reserve this area of system memory for ISA adapter ROM. When this area is reserved, it cannot be cached. The user information of peripherals that need to use this area of system memory usually discuss their memory requirements.	Disabled Enabled
AGP Aperture Size (MB)	This item lets you determine the effective size of the AGP Graphic Aperture.	64 , 4,8,16,32,128 and 256.

Integrated Peripherals

The following table describes each Integrated Peripherals parameters. Settings in boldface are the default and suggested values.

Parameter	Description	Options
Internal PCI/IDE	This setting enables or disables the internal primary and secondary PCI & IDE controllers.	Both , Disabled, Primary, Secondary
IDE Primary Master PIO IDE Primary Slave PIO IDE Secondary Master PIO IDE Secondary Slave PIO	Setting these items to "Auto" activates the HDD speed auto-detect function. The PIO mode specifies the data transfer rate of the HDD. For example, mode 0 data transfer rate is 3.3MB/s, mode 1 is 5.2 MB/s, mode 2 is 8.3MB/s, mode 3 is 11.1 MB/s and mode 4 is 16.6MB/s. If your hard disk performance becomes unstable, you may manually try the slower mode.	Auto, mode 1, mode 2, mode 3 and mode 4
Primary Master UltraDMA Primary Salve UltraDMA Secondary Master UltraDMA Secondary Slave UltraDMA	These items allow you to set the Ultra DMA 33/66/100 mode supported by the hard disk drive connected to your primary and secondary IDE connectors.	Auto Disables
IDE Burst Mode	This allows your hard disk controller to use the fast block mode to transfer data to and from the hard disk drive.	Enabled Disabled
AC97 Audio	Enabling the on-die AC97 Auto if no add-on PCI audio device.	Auto Disabled
System Share Memory Size	For SiS650 chipset, the system shares memory to the onboard VGA card. This setting controls the exact memory size shared to the VGA card.	4, 8, 16, 32 , 64MB
USB Controller	This item is used to enable or disable the on-chip USB.	Enabled Disabled

Parameter	Description	Options
USB Keyboard Support	This item lets you enable or disable the USB keyboard driver within the onboard BIOS. The keyboard driver simulates legacy keyboard command and lets you use a USB keyboard during POST or after boot if you do not have a USB driver in the operating system.	Enabled Disabled
USB Mouse Support	This item lets you enable or disable the USB mouse driver within the onboard BIOS. The keyboard driver simulates legacy mouse command and lets you use a USB mouse during POST or after boot if you do not have a USB driver in the operating system.	Enabled Disabled
Onboard LAN function	To enable or disable the onboard LAN controller	Enabled Disabled
Onboard LAN Boot ROM	This setting determines whether or not to activate the boot ROM of the onboard LAN chip.	Enabled Disabled
IDE HDD Block Mode	Block mode is also called block transfer, multiple commpands or multiple sector read/write. If your IDE hard drive supports block mode (most new drives do), select "Enabled" for automatic detection of the optimal number of block read/write per sector the drive can support.	Enabled Disabled
Onboard FDC Controller	Setting this parameter to "Enable" allows you to connect your floppy disk drives to the onboard floppy disk connector instead of a separate controller card. Change the setting to "Disabled" if you want to use a separate controller card.	Enabled Disabled

Power Management Setup

The Power Management menu lets you configure your system to most effectively save energy while operating in a manner consistent with your own style of computer use.

The following screen shows the Power Management parameters and their default settings:

The following table describes the parameters found in this menu. Settings in **boldface** are the default and suggested settings.

Parameter	Description	Options
ACPI Function	This item is to activate the ACPI (Advanced Configuration and Power Management Interface) Function. If your operating system is ACPI-aware, such as Windows 98SE/2000/Me, select Enabled.	Enabled Disabled
ACPI Suspend Type	This item specifies the power saving modes for ACPI function. S1(POS): The S1 sleep mode is a low power state. In this state, no system context (CPU or chipset) is lost and hardware maintains all system context. S3 (STR): The S3 sleep mode is s power-down state in which power is supplied only to essential components such as main memory and wake-capable devices and all system context is saved to main memory. The information stored in memory will be used to restore the PC to the previous state when an wake-up event occurs. S1&S3: Both S1 and S3 will be adopted.	\$3 \$1 \$1&\$3

Parameter	Description	Options
Video Off Option	This item is to control the mode in which the monitor will shut down. Always On: Always keep the monitor on. Suspend> Off: During suspend mode, the monitorwill shut down. Susp, Stby> During suspend or standby mode, the monitor will shut down. All Modes> Off: The monitor is turned off during doze, standby or suspend mode.	Always On Suspend Off Susp, Stby> Off All Modes
Video Off Method	This item determines the manner in which the monitor is blanked. V/H SYNC+Blank: This selection will cause the system to turn off the vertical and horizontal synchronization ports and write blanks to the video buffer. Blank Screen: This option only write blanks to the video buffer. DPMS Supported: Initial display power management signaling.	V/H SYNC+Blank Blank Screen DPMS Supported
Modem Use IRQ	This setting names the interrupt request (IRQ) line assigned to the modem (if any) on your system. Activity of selected IRQ always awakens the system.	3 , 4, 5, 7, 9, 10, 11, AUTO.
HDD Power Down	If HDD activity is not detected for the length of time specified in this field, the hard disk drive will be powered down while all other devices remain active.	Disabled 1~15 Mins
Soft-off by PWR-BTTN	This feature allows users to configure the power button function.	Instant Off: The power button functions as a normal power-on/-off button. Delay 4 Sec: When you press the power button, the computer enters the suspend/ sleep mode, but if the button is pressed for more than four seconds, the computer will be turned off.
Aftrer PC Power Lost	This item specifies when your system reboot after a power failure or interrupt occurs.	Power Off Power On Last State
Power On by Ring	When enabled, any fax/modem activity wakes up the system from suspend mode.	Disabled Enabled
Wake-Up by PCI Card	Use PCI Wake-up system. PCI must meet PCI 2.2 specification.	Disabled Enabled
Resume by Alarm	Use this option to set the date and time for your computer to boot up. Date (of month) Alarm* - Indicate the month for system to boot up. Set it to 0 if you want to boot up everyday. Time (hh:mm:ss) Alarm* - Indicate the hour, minute and second for system to boot up.	Disabled Enabled *Set Resume by Alarm to Enable, then press "Enter" to show the range of Date and Time Alarm.

PnP/PCI Configuration

The following table describes the parameters found in this menu. Settings in **boldface** are the default and suggested settings.

Parameter	Description	Options
Reset Configuration Data	Selecting "Enabled" to reset Extended System Configuration Data (ESCD) only if you installed a new add-on and the system reconfiguration has caused such a serious conflict that the operating system can not boot. Otherwise, you should leave it unchanged.	Disabled Enabled
Resources Controlled By	This BIOS can automatically configure all of the boot and Plug and Play compatible devices. You can also set it as Manual and go into each of the sub menu to choose specific resources.	Auto (ESCD) Manual
IRQ Resources	The items are adjustable only when "Resources Controlled By" is set to Manual. By pressing "Enter" to access the sub menu.	PCI Device Reserved
PCI/VGA Palette Snoop	Disabled - Data read or written by the CPU is only directed to the PCI VGA device's palette registers. Enabled - Data read or written by the CPU is directed to both the PCI VGA device's palette registers and the ISA VGA device's palette registers, permitting the palette registers of both VGA devices to be identical.	Disabled Enabled *If any ISA bus adapter in the system requires VGA Palette snooping, the setting must be set to "Enabled".

NOTE: It is strongly recommended that only experienced users should make any changes to the default settings.

PC Health Status

The following table describes the parameters found in this menu:

Parameter	Description	Options
Shutdown Temperature	This option is for setting the shutdown temperature level for the processor. When the processor reaches the temperature you set, the ACPI-aware system will be shut down.	
Current System/CPU Temperature, CPU/ System fan, Vcore, ect.	These items display the current status of all of the mainboard hardware devices/components such as CPU voltages, temperatures and all fans' speeds.	

Frequency Control

The following table describes the parameters found in this menu. Settings in **boldface** are the default and suggested settings.

Parameter	Description	Options
Set CPU Ratio	End users can overlock the processor by specifying the CPU ratio (clock multiplier) in this field.	Auto Manual
CPU Clock Ratio	If the CPU Ratio is set to Manual, end users can choose a suitable ratioto support the CPU.	8x to 50x
Auto Detect DIMM/PCI Clk	This option allows you to enable/disable the feature of auto detecting the clock frequency of the installed DIMM/PCI bus.	Enabled Disabled
Spread Spectrum	When the motherboard's clock generator pulses, the extreme values (spikes) of the pulses creates EMI (Electromagnetic Interference). The spread Spectrum function reduces the EMI generated by modulating the pulses so that the spikes of the pulses are reduced to flatter curves. If you do not have any EMI problem, leave the setting at Disabled for optimal system stability and performance. But if you are plagued by EMI, setting to Enabled for EMI reduction. Remember to disable Spread Spectrum if you are overlocking because even a slight jitter can introduce a temporary boost in clockspeed which may just cause your overlock ed processor to lock up.	
DRAM Frequency	This setting let end users select the DRAM frequency.	By SPD 200 Mhz 266 Mhz 333 Mhz

Load Default Settings

The default settings are the default values set by the mainboard manufacturer specifically for optimal performance of the mainboard. When you select the item, a message as below appears:

Pressing Y (Yes) loads the BIOS default values for the most stable system performance.

Set Supervisor/User Password

When you choose to set supervisor password, a message as below will appear on the screen:

At the prompt, type your password. Your password can be up to **six** characters in length. After typing the password, press "Enter". At the next prompt, re-type your password and press "Enter" again to confirm the new password. After the password entry, the screen automatically reverts to the main screen.

To disable the password, press "Enter" when prompted to enter the password. The following screen will display a message confirming that the password has been disabled.

If you select Set User Password, a message as below will appear:

At the prompt, type your password. Your password can be up to **six** characters in length. After typing the password, press "Enter". At the next prompt, re-type your password and press "Enter" again to confirm the new password. After the password entry, the screen automatically reverts to the main screen.

To disable User Password, press "Enter" when prompted to enter the password. The following screen will display a message confirming that the password has been disabled.

Save & Exit Setup/Exit Without Saving

If you select Save and Exit Setup, you will exit the BIOS utility. The following dialogue box will appear.

Select Y (Yes) to exit Setup. Select N (No) to return to the main menu.

If you select Exit Without Saving, you will discard all the changes you made and exit Setup.

Machine Disassembly and Replacement

This chapter contains step-by-step procedures on how to disassemble the Veriton 3300/3300D desktop computer for maintenance and troubleshooting.

To disassemble the computer, you need the following tools:

Wrist grounding strap and conductive mat for preventing electrostatic discharge
Flat-bladed screwdriver
Phillips screwdriver
Hexagonal screwdriver
Plastic stick

NOTE: The screws for the different components vary in size. During the disassembly process, group the screws with the corresponding components to avoid mismatches when putting back the components.

Chapter 3 48

General Information

Before You Begin

Before proceeding with the disassembly procedure, make sure that you do the following:

- **1.** Turn off the power to the system and all peripherals.
- 2. Unplug the AC adapter and all power and signal cables from the system.

Disassembly Procedure Flowchart

The flowchart on the succeeding page gives you a graphical representation on the entire disassembly sequence and instructs you on the components that need to be removed during servicing.

Chapter 3 50

Opening the Housing

This section tells you how to open the housing cover when you need to install additional components inside the system unit.

CAUTION: Before you proceed, make sure that you have turned off the system and all peripherals connected to it.

Removing the Housing Cover

1. Place the system unit on a flat, steady surface.

2. Turn the housing back.

3. Slide the upper case back out about an inch and then gently pull it outward to detach it from the housing.

Removing the Front Panel

- 1. See "Opening the Housing" on page 51
- 2. Remove the four screws as shown here.

3. Detach the front bezel from the front panel gently in the way as shown here.

Removing the EMI Audio Cover

- 1. See "Opening the Housing" on page 51
- 2. Remove the EMI audio cover from the lower case.

Chapter 3 52

Removing the Modem Card

- 1. See "Opening the Housing" on page 51
- 2. Remove the screw as shown below and then remove the modern card from the slot.

Removing the AGP VGA Card

- 1. See "Opening the Housing" on page 51
- 2. Remove the screw as shown here and then remove the AGP VGA card from the slot.

Removing the FDD and DVD Frame

- 1. See "Opening the Housing" on page 51
- 2. Push the two latches of both sides then lift up the FDD and DVD frame.

3. Disconnect the floppy disk drive and power cables from the floppy disk drive.

4. Disconnect the power cable, IDE cable, and audio cable from the DVD-ROM drive.

5. Disconnect the micro switch cable from the main board.

6. Pull the FDD and DVD frame from the lower case.

7. Remove the four screws as shown here then detach the DVD-ROM drive from the frame.

Chapter 3 54

8. Remove the four screws as shown here then detach the floppy disk drive from the frame.

9. Disconnect micro switch cable from the FDD and DVD frame.

Removing the Intrusion Alarm Cable

- 1. See "Opening the Housing" on page 51
- 2. See "Removing the FDD and DVD Frame" on page 53"
- 3. Detach the intrusion alarm cable from the FDD and DVD Frame.

Removing the USB and Audio Board

- 1. See "Opening the Housing" on page 51
- 2. See "Removing the EMI Audio Cover" on page 52
- 3. See "Removing the FDD and DVD Frame" on page 53
- 4. Disconnect the USB board cable and audio board cable from the USB and audio board.

5. Remove the two screws as shown here then detach the USB and audio board from the lower case.

Removing the Hard Disk Drive

- 1. See "Opening the Housing" on page 51
- 2. See "Removing the FDD and DVD Frame" on page 53
- 3. Disconnect the IDE cable and HDD power cable from the hard disk drive.

4. Remove the two screws as shown here and then hold the hard disk drive frame.

Chapter 3 56

5. Slide the hard disk drive frame to the right and then gently move it inward to detach it from the lower case.

6. Remove the four screws as shown and then detach the hard disk drive from the frame.

Removing the DIMM

- 1. See "Opening the Housing" on page 51
- 2. See "Removing the FDD and DVD Frame" on page 53"
- 3. To release the system memory, press down and out on the levers on both sides of the DIMM socket.

4. Gently pull the DIMM out of the socket.

Removing the Power Supply

- 1. See "Opening the Housing" on page 51.
- 2. See "Removing the FDD and DVD Frame" on page 53"
- 3. Remove the two screws as shown here.

4. Disconnect the power cable from the main board.

5. Gently remove the power supply from the system.

Removing the RTC Battery

- 1. See "Opening the Housing" on page 51
- **2.** To remove the RTC battery from the holder, gently remove it from the holder by hand.

Chapter 3 58

Removing the Processor

- 1. See "Opening the Housing" on page 51
- 2. See "Removing the FDD and DVD Frame" on page 53"
- 3. Disconnect the fan sink cable from the main board, and then release the two levers on both sides of the fan sink.

.

4. Put the two levers back to the original position, and then remove the CPU fan sink from the main board

5. Lift up the socket lever, pull the CPU out from the socket carefully and then put the socket lever back to its original position.

Removing the Main board

- 1. See "Opening the Housing" on page 51
- 2. See "Removing the FDD and DVD Frame" on page 53
- 3. Remove the six screws as shown here then detach the main board from the lower case.

Chapter 3 60

Troubleshooting

This chapter	provides	troubleshooting	information	for the As	spire 3300S:

- ☐ Power-On Self-Test (POST)
- ☐ Index of Error Message
- ☐ Index of Error Symptoms
- Undetermined Problems

Chapter 4 62

Power-On Self-Test (POST)

Each time you turn on the system, the Power-on Self Test (POST) is initiated. Several items are tested during POST, but is for the most part transparent to the user.

The Power-On Self Test (POST) is a BIOS procedure that boots the system, initializes and diagnoses the system components, and controls the operation of the power-on password option. If POST discovers errors in system operations at power-on, it displays error messages on screen, generates a check point code at port 80h or even halts the system if the error is fatal.

The main components on the main board that must be diagnosed and/or initialized by POST to ensure system functionality are as follows:

Microprocessor with built-in numeric co-processor and cache memory subsystem		
Direct Memory Access (DMA) controller (8237 module)		
Inte	errupt system (8259 module) or APIC (advance program interrupt controller)	
Thr	ee programmable timers (system timer and 8254 module)	
RO	M subsystem	
RA	M subsystem	
СМ	OS RAM subsystem and real time clock/calendar with battery backup	
Onl	poard serial interface controller	
Onboard parallel interface controller		
Embedded hard disk interface and one diskette drive interface		
Keyboard and auxiliary device controllers		
I/O ports		
	Two RS232 serial ports	
	One parallel port	
	One PS/2-compatible mouse port	
	OnePS/2-compatible keyboard port	

NOTE: When Post executes a task, it uses a series of preset numbers called check points to be latched at port 80h, indicating the stages it is currently running. This latch can be read and shown on a debug board.

The following table describes the BIOS common tasks carried out by POST. Each task is denoted by an unique check point number. For other unique check point numbers that are not listed in the table, refer to the correspoing product service guide.

Post Checkpoints List: The list may vary accordingly depending on your BIOS.

Checkpoint	Description
CFh	Test CMOS R/W functionality
C0h	Early chipset initialization:
	-Disable shadow RAM
	-Disable L2 cache (socket 7 or below)
	-Program basic chipset registers
C1h	Detect memory
	-Auto-detection of DRAM size, type and ECC.
	-Auto-detection of L2 cache (socket 7 or below)
C3h	Expand compressed BIOS code to DRAM
C5h	Call chipset hook to copy BIOS back to E000 & F000 shadow RAM.
0h1	Expand the Xgroup codes locating in physical address 1000:0
02h	Reserved

Initial Superio_Early_Init switch	Checkpoint	Description
1. Blank out screen 2. Clear CMOS error flag 06h Reserved 07h 1. Clear 8042 interface 2. Initialize 8042 self-test 08h 1. Test special keyboard controller for Winbond 977 series Super I/O chips. 2. Enable keyboard interface. 09h Reserved 0Ah 1. Disable PS/2 mouse interface (optional) 2. Auto detect ports for keyboard & mouse followed by a port & interface swap (optional). 3. Reset keyboard for Winbond 977 series Super I/O chips. 0Bh Reserved 0Ch Reserved 0Dh Reserved 0Dh Reserved 0Dh Reserved 0Fh Reserved 0Fh Reserved 10h Auto detect flash type to load appropriate flash R/W codes into the run time area in F000 for ESCD & DMI support. 11h Reserved 12h Use walking 1's algorithm to check out interface in CMOS circuitry. Also set real-time clock power status, and then check for override. 15h Reserved 16h Initial Early_Init_Onboard_Generator switch. 17h Reserved 18h Detect CPU information including brand, SMI type (Cyrix or Intel) and CPU level (586 or 686) 19h Reserved 10h Initial Early_Init_Onboard_Generator switch. Reserved 18h Initial interrupts vector table. If no special specified, all H/W interrupts are directed to SPURIOUS_INT_HDLR & S/W interrupts to SPURIOUS_soft_HDLR. 16h Reserved 17h Reserved 17h Reserved 18h Initial interrupts vector table. If no special specified, all H/W interrupts are directed to SPURIOUS_INT_HDLR & S/W interrupts to SPURIOUS_soft_HDLR. 17h Reserved	03h	Initial Superio_Early _Init switch
2. Clear CMOS error flag 06h Reserved 07h 1. Clear 8042 interface 2. Initialize 8042 self-test 08h 1. Test special keyboard controller for Winbond 977 series Super I/O chips. 2. Enable keyboard interface. 09h Reserved 0Ah 1. Disable PS/2 mouse interface (optional) 2. Auto detect ports for keyboard & mouse followed by a port & interface swap (optional). 3. Reser keyboard for Winbond 977 series Super I/O chips. 0Bh Reserved 0Ch Reserved 0Ch Reserved 0Eh Test F000h segment shadow to see whether it is R/W-able or not. Chapter 4 64

Checkpoint	Description
23h	Check validity of RTC value:
	e.g. a value of 5Ah is an invalid value for RTC minute.
	2. Load CMOS settings into BIOS stack. If CMOS checksum fails, use default value
	instead.
	3. Prepare BIOS resource map for PCI & PnP use. If ESCD is valid, take into
	consideration of the ESCD's legacy information. 4. Onboard clock generator initialization. Disable respective clock resource to empty PCI
	& DIMM slots.
	5. Early PCI initialization
	-Enumerate PCI bus number
	-Assign memory & I/O resource
	-Search for a valid VGA device and VGA BIOS, and put it into C000:0
24h	Reserved
25h	Reserved
26h	Reserved
27h	Initialize INT 09 buffer
28h	Reserved
29h	1. Program CPU internal MTRR (P6 & PII) for 0-640K memory address.
	2. Initialize the APIC for Pentium class CPU.
	Program early chipset according to CMOS setup. Example: onboard IDE controller. Magazine CRI annual.
	4. Measure CPU speed. 5. Invoke video BIOS.
2Ah	Reserved
2Bh	Reserved

Chapter 4 66

Checkpoint	Description		
67h	Prepare memory size information for function call:		
	INT 15h ax=E820h		
68h	Reserved		
69h	Turn on L2 cache		
6Ah	Reserved		
6Bh	Program chipset registers according to items described in Setup& Auto-configuration table.		
6Ch	Reserved		
6Dh	Assign resources to all ISA PnP devices. Auto assign ports to onboard COM ports if the corresponding item in Setup is set to "AUTO"		
6Eh	Reserved		
6Fh	Initialize floppy controller Set up floppy related fields in 40: hardware.		
70h	Reserved		
71h	Reserved		
72h	Reserved		
73h	(Optional Feature) Enter AWDFLASH.EXE if: -AWDFLASH is found in floppy drive -ALT+F2 is pressed		
74h	Reserved		
75h	Detect & install all IDE devices: HDD, LS120, ZIP,CDROM		
76h	Reserved		
77h	Detect serial ports & parallel ports		
78h	Reserved		
79h	Reserved		
7Ah	Detect & install co-processor		
7Bh	Reserved		
7Ch	Reserved		
7Dh	Reserved		
7Eh	Reserved		
7Fh	Switch back to text mode if full screen logo is supported. -If errors occur, report errors & wait for keys -If no errors occur or F1 key is pressed to continue: Clear EPA or customization logo.		
80h	Reserved		
81h	Reserved		
82h	Call chipset power management hook. Recover the text fond used by EPA logo (not for full screen logo) If password is set, ask for password.		
83h	Save all data in stack back to CMOS.		
84h	Initialize ISA PnP boot devices.		

Checkpoint	Description
85h	1. USB final Initialization
	2. NET PC: Build SYSID structure
	3. Switch screen back to text mode.
	4. Set up ACPI table at top of memory.
	5. Invoke ISA adapter ROMs.
	6. Assign IRQs to PCI devices
	7. Initialize APM
	8. Clear noise of IRQs/
86h	Reserved
87h	Reserved
88h	Reserved
89h	Reserved
90h	Reserved
91h	Reserved
92h	Reserved
93h	Read HDD boot sector information for Trend Anti-Virus code
94h	1. Enable L2 cache
	2. Program boot up speed
	3. Chipset final initialization
	4. Power management final initialization
	5. Clear screen & display summary table
	6. Program K6 write allocation
	7 Program P6 class write combining .
95h	Program daylight saving
	2. Update keyboard LED & typematic rate
96h	1. Build MP table
	2. Build & update ESCD
	3. Set CMOS century to 20h or 19h
	4. Load CMOS time into DOS timer tick
	5. Build MSIRQ routing table
FFh	Boot attempt (INT 19h)

Chapter 4 68

POST Error Messages List

If you cannot run the diagnostics program tests but did receive a POST error message, use "POST Error Messages List" to diagnose system problems. If you did not receive any error message, look for a description of your error symptoms in "Error Symptoms List" on page 71.

NOTE: When you have deemed it necessary to replace an FRU, and have done so, you must run a total system check to ensure that no other activity has been affected by the change. This system check can be done through the diagnostics program.

NOTE: Check all power supply voltages, switch, and jumper settings before you replace the main board. Also check the power supply voltages if you have a "system no-power" condition.

If you are unable to correct the problem by using the "BIOS Messages List" table and "Error Symptoms List" table, go to "Undetermined Problems" on page 75.

NOTE: To diagnose a problem, first find the BIOS error messages in the left column. If directed to a check procedure, replace the FRU indicated in the check procedure. If no check procedure is indicated, the first Action/FRU listed in right column is the most likely cause.

BIOS Messages	Action/FRU	
CMOS Battery Bad	Battery should be replaced	
CMOS Checksum Error	Check the battery and replace if necessary.	
Disk Boot Failure	Insert system disk into Drive (A:)and press Intermediate Inf you assumed the system would boot from the hard drive, make sure the controller is inserted correctly and all cables are properly attached. Also be sure the disk is formatted as a boot device. Then reboot the system.	
Diskette Drives or Types Mismatch Error	Run Setup	
Display Switch Is Set Incorrectly	Determine which setting is correct, and then either turn off the system and change the jumper, or enter Setup and change the VIDEO selection.	
Display Type Has Changed Since Last Boot	Configure the system for the new display type/	
Error Encountered Initializing Hard Drive	Be sure the adapter is installed correctly and all cables are correctly and firmly attached. Also be sure the correct hard drive type is selected in Setup .	
Error Encountered Initializing Hard Disk Controller	Make sure the cord is correctly and firmly installed in the bus. Be sure the correct hard drive type is selected in Setup. Also check if any jumper needs to be set correctly on the hard drive.	
Floppy Disk CNTRLR Error or No CNTRLR Present	Make sure the controller is installed correctly and firmly. If there are no floppy drives installed, be sure the Diskette Drive selection in Setup is set to None .	
Keyboard Error or No Keyboard Present	Make sure the keyboard is attached correctly and no keys are pressed during the boot. NOTE: If you are purposely configuring the system without a keyboard, set the error halt condition in Setup to HALT ON ALL, BUT KEYBOARD. This will cause BIOS to ignore the missing keyboard and continue the boot.	
Memory Address Error	Use this location along with the memory map for your system to find and replace the bad memory chips.	
Memory Parity Error	Use this location along with the memory map for your system to find and replace the bad memory chips.	
Memory Size Has Changed Since Last Boot	In EISA mode, use Configuration Utility to reconfigure the memory configuration. In ISA mode, enter Setup and enter the new memory size in the memory fields.	

BIOS Messages	Action/FRU
Memory Verify Error	Use this location along with your system's memory map to locate the bad chip.
Offending Address Not Found	This message is used in conjunction with the I/O CHANNEL CHECK and RAM PARITY ERROR messages when the segment that has caused problem cannot be isolated.
Offending Segment	This message is used in conjunction with the I/O CHANNEL CHECK and RAM PARITY ERROR messages when the segment that has caused problem cannot be isolated.
Press A Key To Reboot	Press any key and the system will reboot.
Press to Disable NMI, to Reboot	When the BIOS detects a Non-maskable Interrupt condition during boot, this will allow you to disable the NMI and continue to boot, or you can reboot the system with the NMI enabled.
RAM Parity Error	Checking for segment
System Halted	Press CTRL - ALT - DEL to reboot.
	Or plug out AC and wait for 10 seconds, then plug in AC again. Press power button to boot the system again.
Floppy Disk(s) Fail(80)	Unable to reset floppy subsystem
Floppy Disk(s) Fail (40)	Floppy Type mismatch
Hard Disk(s) Fail (80)	HDD reset failed
Hard Disk(s) Fail (40)	HDD controller diagnostics failed
Hard Disk(s) Fail (20)	HDD initialization error
Hard Disk(s) Fail (10)	Unable to recalibrate fixed disk
Hard Disk(s) Fail (08)	Sector Verify failed
Keyboard Is Locked Out	Unlock the key
Keyboard Error Or No Keyboard Present	Make sure the keyboard is attached correctly and no keys are pressed during the boot.
Manufacturing POST loop	System will repeat POST procedure infinitely while the P15 of keyboard controller is pull low. This is also used for M/B burn in test.
BIOS ROM Checksum Error	BIOS will boot from the boot block and read BIOS binary file from FDD disk, then flash BIOS ROM (FWH - Firmware Hub).
Memory Test Fail	BIOS reports the memory test fail if the onboard memory is tested error

Chapter 4 70

Error Symptoms List

NOTE: To diagnose a problem, first find the error symptom in the left column. If directed to a check procedure, replace the FRU indicated in the check procedure. If no check procedure is indicated, the first Action/FRU listed in right column is the most likely cause.

Error Symptom	Action/FRU		
	cessor / Processor Fan		
NOTE: Normally, the processor fan should be operative, and the processor clock setting should be exactly set to match its speed requirement before diagnosing any processor problems.			
Processor fan does not run but power supply fan runs.	 Ensure the system is not in power saving mode. See "Power Management" in chapter 2. With the system power on, measure the voltage of processor fan connector. Its reading should be +12Vdc. Its reading should be +12Vdc. If the reading shows normal, but the fan still does not work, then replace a good fan. Main board. 		
Processor test failed.	Processor. Main board.		
Ma	ain board and Memory		
NOTE: Ensure the memory modules a diagnosing any system problem	are installed properly and the contact leads are clean before as.		
Memory test failed.	See "Memory" Main board		
Incorrect memory size shown or repeated during POST.	Insert the memory modules in the DIMM sockets properly, then reboot the system. Memory module. Main board.		
System works but fails to enter power saving mode when the Power Management Mode is set to Enabled.	Enter BIOS Setup and load default settings. In Windows Systems, check settings in Power Management Property of Control Panel. Reload software from Recovery CD.		
Blinking cursor only; system does not work.	 Diskette/IDE drive connection/cables Diskette/IDE disk drives See "Undetermined Problems". Main board 		
	Diskette Drive		
diagnosing any diskette drive p	o-setting in BIOS Setup and its read/write head is clean before roblems.(If only one drive is installed, please make sure the nnector or the drive is set to master.)		
Media and drive are mismatched.	Ensure the diskette drive is configured correctly in the Disk Drives of BIOS Setup. Ensure the diskette drive is correctly formatted. Diskette drive connection/cable Diskette drive Main board		
Diskette drive does not work.	Ensure the diskette drive is not set to None in the Disk Drives of BIOS Setup. Diskette drive power Diskette drive connection/cable Diskette drive Main board		
Diskette drive read/write error.	 Diskette. Ensure the diskette drive is not set to Write protect in the Security Options of BIOS Setup. Diskette drive cable. Diskette drive. Main board. 		

Error Symptom	Action/FRU
Diskette drive LED comes on for more than 2 minutes when reading data.	Diskette Diskette drive connection/cable Diskette drive Main board
Diskette drive LED fails to light, and the drive is unable to access for more than 2 minutes.	Diskette Diskette drive power Diskette drive connection/cable Diskette drive Main board
Diskette drive test failed.	Diskette Diskette drive Diskette drive cable Main board
	Hard Disk Drive
before diagnosing any hard disl	gured correctly in BIOS Setup, cable/jumper are set correctly k drive problems. (If only one drive is installed, please make naster connector or the drive is set to master.)
Hard disk drive test failed.	Enter BIOS Setup and Load default settings. Hard disk drive cable. Hard disk drive. Main board.
Hard disk drive cannot format completely.	Enter BIOS Setup and Load default settings. Hard disk drive cable. Hard disk drive. Main board.
Hard disk drive has write error.	Enter BIOS Setup and Load default settings. Hard disk drive.
Hard disk drive LED fails to light, but system operates normally.	With the system power on, measure the voltage of hard disk LED connector. Hard drive LED cable.
	CD/DVD-ROM Drive
	configured correctly in BIOS Setup, cable/jumper are set clean before diagnosing any CD/DVD-ROM drive problems.
CD/DVD-ROM drive LED doesn't come on but works normally.	CD/DVD-ROM drive
CD/DVD-ROM drive LED flashes for more than 30 seconds before LED shutting off.	CD/DVD-ROM may have dirt or foreign material on it. Check with a known good disc. CD/DVD-ROM is not inserted properly. CD/DVD-ROM is demograd.
Software asks to reinstall disc. Software displays a reading CD/DVD error.	CD/DVD-ROM is damaged.
CD/DVD-ROM drive cannot load or eject when the system is turned on and its eject button is pressed and held.	Disconnect all cables from CD/DVD-ROM drive except power cable, then press eject button to try to unload the disk. CD/DVD-ROM drive power. CD/DVD-ROM drive
CD/DVD-ROM drive does not read and there are no messages are displayed.	CD may have dirt or foreign material on it. Check with a known good disc. Ensure the CD/DVD-ROM driver is installed properly. CD/DVD-ROM drive.
CD/DVD-ROM drive can play audio CD but no sound output.	 Ensure the headphone jack of the CD/DVD-ROM has an output. Turn up the sound volume. Speaker power/connection/cable. CD/DVD-ROM drive.
	Real-Time Clock
Real-time clock is inaccurate.	Ensure the information in the Date and Time of BIOS Setup is set correctly. RTC battery. Main board

Chapter 4 72

Error Symptom	Action/FRU		
Audio			
Audio software program invokes but no sound comes from speakers.	Speaker power/connection/cable.		
	Modem		
Modem ring cannot wake up system from suspend mode.	 For the External Modem, make sure Power on By Ring in BIOS Setup or Power Management is set to Enabled. For the PCI modem, make sure Wake up by PCI card is set to Enabled. If PCI modem card is used, reinsert the modem card to PCI slot firmly or replace the modem card. In Win 98, ensure the telephone application is configured correctly for your modem and set to receive messages and/or fax. 		
Data/fax modem software program invokes but cannot receive/send data/fax	Ensure the modem card is installed properly.		
Fax/voice modem software program invokes but has no sound output. (Data files are received normally; voice from modem cannot be produced, but system sound feature works normally.)	Ensure the modem voice-in cable from modem adapter card to main board		
	Video and Monitor		
Video memory test failed. Video adapter failed.	Remove all non-factory-installed cards. Load default settings (if screen is readable). Main board		
Display problem: - Incorrect colors No high intensity Missing, broken, or incorrect characters Blank monitor(dark) Blank monitor(bright) Distorted image Unreadable monitor Other monitor problems	Monitor signal connection/cable. Monitor Wideo adapter card Main board		
Display changing colors.	Monitor signal connection/cable Monitor Main board		
Display problem not listed above (including blank or illegible monitor).	"Monitor". Load default settings (if screen is readable). Main board		

Error Symptom	Action/FRU		
Parallel/Serial Ports			
Execute "Load BIOS Default Settings" in BIOS Setup to confirm ports presence before diagnosing any parallel/serial ports problems.			
Serial or parallel port loop-back test failed. 1. Make sure that the LPT# or COM# you test is the same as the setting in BIOS Setup. 2. Loop-back. 3. Main board.			
Printing failed.	 Ensure the printer driver is properly installed. Refer to the printer service manual. Printer. Printer cable. Main board. 		
Printer problems.	Refer to the service manual for the printer.		
	Keyboard		
Some or all keys on keyboard do not work.	1. Keyboard		
	Power Supply		
Pressing power switch does not turn off system. (Only unplugging the power cord from electrical outlet can turn off the system.)	Ensure the Power Switch < 4 sec. in BIOS Setup of Power Management is not set to Instant-off. Power switch cable assembly		
Pressing power switch does not turn on the system.	Ensure the power override switch (situated at the back of the machine, just above the connector for the power cable) is not set to OFF. Power switch cable assembly.		
Executing software shutdown from Windows98 Start menu does not turn off the system. (Only pressing power switch can turn off the system).	Load default settings. Reload software from Recovery CD.		
No system power, or power supply fan is not running.	Power Supply Main board		
Other Problems			
Any other problems.	Undetermined Problems		

Chapter 4 74

Undetermined Problems

If an error message is present, go to "POST Error Messages List" on page 69. If you did not receive any messages, see if the symptom is listed in "Error Symptoms List" on page 71. If you still cannot solve the problem, continue with this check:

- 1. Check the power supply voltages. If the voltages are correct continue with the following steps:
- 2. Power off the system unit.
- Perform the following checks, one by one, until you have isolated the problem FRU.
- 4. Load default settings in setup.
- Check all main board jumper positions and switch settings.
- 6. Check all adapter card jumper positions.
- 7. Check all device jumper positions.
- 8. Check all cables and connectors for proper installation.
- 9. If the jumpers, switches and voltage settings are correct, remove or disconnect the following, one at a time:

	External devices
	Any adapter card (modem card, LAN card or video card, if installed)
	CD/DVD-ROM drive
	Diskette drive
	Hard disk drive
	DIMM

Main board11. Power on the system unit.

Processor

10. Non-Acer devices

12. Repeat steps 2 through 5 until you find the failing device or adapter.

Jumper and Connector Information

Connectors

The mainboard provides connectors to connect to FDD, IDE HDD, case, modem, LAN, USB Ports, IR module and CPU/System FAN.

Floppy Disk Drive Connector: FDD1

The mainboard provides a standard floppy disk drive connector that supports 360K, 720K, 1.2M, 1.44M and 2.88M floppy disk types.

Chassis Intrusion Switch Connector: J8

This connector is connected to 2-pin connector chassis switch. If the Chassis is open, the switch will be short. The system will record this status. To clear the warning, you must enter the BIOS setting and clear the status.

Chapter 5 76

Hard Disk Connectors: IDE1 & IDE2

The mainboard has a 32-bit Enhanced PCI IDE and Ultra DMA 33/66/100 controller that provides PIO mode 0~4, Bus Master, and Ultra DMA33/66/100 function. You can connect up to four hard disk drives, CD-ROM, 120MB Floppy (reserved for future BIOS) and other devices. These connectors support the provided IDE hard disk cable.

IDE1(Primary IDE Connector)

The first hard drive should always be connected to IDE1. IDE1 can connect a Master and a Slave drive. You must configure second hard drive to Slave mode by setting the jumper accordingly.

IDE2(Secondary IDE Connector)

IDE2 can also connect a Master and a Slave drive.

If you install two hard disks on cable, you must configure the second drive to Slave mode by setting its jumper. Refer to the hard disk documentation supplied by hard disk vendors for jumper setting instructions.

CD-In Connector: JCD1

The connector is for CD-ROM audio connector.

Aux Line-In Connector: JAUX1

The connector is for DVD add-on card with Line-in connector.

Modem-In Connector: JMD1

The connector is for modem with internal audio connector.

Chapter 5 78

Fan Power Connectors: CPUFA/SYSFA

The CPUFA (processor fan) & SYSFA (system fan) support system cooling fan with ± 12 V. It supports three-pin head connector. When connecting the wire to the connectors, always take note that the red wire is the positive and should be connected to the ± 12 V, the black wire is Ground and should be connected to GND. If the mainboard has a System Hardware Monitor chipset on-board, you must use a specially designed fan with speed sensor to take advantage of the CPU fan control.

- 1. Always consult the vendor for proper CPU cooling fan.
- 2. CPU Fan supports the fan control. You can install the PC Alert utility that will automatically control the CPU Fan speed according to the actual CPU temperature.

Front Panel Connectors: JFP1 & JFP2

The mainboard provides front panel connectors for electrical connection to the front panel switches and LEDs. Users can choose either the JFP1 or the JFP2 depending on their needs. **JFP1 is compliant with InteFront Panel I/O Connectivity Design Guide**

PIN	SIGNAL	DESCRIPTION
1	HD_LED_P	Hard disk LED pull-up
2	FP PWR/SLP	MSG LED pull-up
3	HD_LED_N	Hard disk active LED
4	FP PWR/SLP	MSG LED pull-up
5	RST_SW_N	Reset Switch low reference pull-down to GND
6	PWR_SW_P	Power Switch high reference pull-up
7	RST_SW_P	Reset Switch high reference pull-up
8	PWR_SW_N	Power Switch low reference pull-down to GND
9	RSVD_DNU	Reserved. Do not use.

Note for JFP2:

If onboard buzzer is available, you can short pins 4 & 6 to have the buzzer enabled or open pins 4 & 6 to have the buzzer disabled.

Chapter 5 80

Front Panel Audio Connector: JAUD

You can connect an optional audio connector to the Front Panel Audio Header. JAUD is compliant with InteFront Panel I/O Connectivity Design Guide.

Pin Definition

PIN	SIGNAL	DESCRIPTION
1	AUD_MIC	Front panel microphone input signal
2	AUD_GND	Ground used by analog audio circuits
3	AUD_MIC_BIAS	Microphone power
4	AUD_VCC	Filtered +5V used by analog audio circuits
5	AUD_FPOUT_R	Right channel audio signal to front panel
6	AUD_RET_R	Right channel audio signal return from front panel
7	HP_ON	Reserved for future use to control headphone amplifier
8	KEY	No pin
9	AUD_FPOUT_L	Left channel audio signal to front panel
10	AUD_RET_L	Left channel audio signal return from front panel

CAUTION!!!

If you don't want to connect to the front audio header, pins 5 & 6, 9 & 10 have to be jumpered in order to have signal output directed to the rear audio ports. Otherwise, the Line-Out connector on the back panel will not function.

Front USB Connector: JUSB1 or JUSB2

The mainboard provides one front Universal Serial Bus connector for users to connect to USB devices. Users can choose either the JUSB1 or the JUSB2 depending on their needs. **The JUSB1 is compliant with InfeFront Panel I/O Connectivity Design Guide.**

JUSB1 Pin Definition

Pin	Description	Pin	Description
1	VCC	2	VCC
3	USB0-	4	USB1-
5	USB0+	6	USB1+
7	GND	8	GND
9	NC	10	OC0

JUSB2 Pin Definition

Pin	Description	Pin	Description				
1	VCC	2	GND				
3	USB0-	4	GND				
5	USB0+	6	USB1+				
7	GND	8	USB1-				
9	GND	10	vcc				

Chapter 5 82

IrDA Infrared Module Header: JIR1

This connector allows you to connect to IrDA Infrared modules and is **compliant with Interpret Panel I/O Connectivity Design Guide**au must configure the setting through the BIOS setup to use the IR function.

JIR1 Pin Definition

Pin	Signal
1	NC
2	NC
3	vcc
4	GND
5	IRTX
6	IRRX

Jumpers

The motherboard provides one jumper for you to set the computer's function. This section will explain how to change your motherboard's function through the use of the jumper.

Clear CMOS Jumper: JBAT1

There is a CMOS RAM on board that has a power supply from external battery to keep the data of system configuration. With the CMOS RAM, the system can automatically boot OS every time it is turned on. That battery has long life time for at least 5 years. If you want to clear the system configuration, use the JBAT1 (Clear CMOS Jumper) to clear data. Follow the instructions below to clear the data:

You can clear CMOS by shorting 2-3 pin while the system is off. Then return to 1-2 pin position. Avoid clearing the CMOS while the system is on; it will damage the mainboard.

Chapter 5 84

Slots

The motherboard provides three 32-bit Master PCI bus slots, one AGP slot and one CNR slot.

AGP (Accelerated Graphics Port) Slot

The AGP slot allows you to insert the AGP graphics card. AGP is an interface specification designed for the throughput demands of 3D graphics. It introduces a 66MHz, 32-bit channel for the graphics controller to directly access main memory. The slot only supports **4x** AGP card.

PCI Slots

Three PCI slots allow you to insert the expansion cards to meet your needs. When adding or removing expansion cards, make sure that you unplug the power supply first. Meanwhile, read the documentation for the expansion card to make any necessary hardware or software settings for the expansion card, such as jumpers, switches or BIOS configuration.

CNR (Communication Network Riser)

The CNR slot allows you to insert the CNR expansion cards. CNR is a specially designed network, audio, or modem riser card for ATX family motherboards. Its main processing is done through software and controlled by the motherboard's chipset.

PCI Interrupt Request Routing

The IRQ, abbreviation of interrupt request line and pronounced I-R-Q, are hardware lines over which devices can send interrupt signals to the microprocessor. The PCI IRQ pins are typically connected to the PCI bus INT A# \sim INT D# pins as follows:

	Order 1	Order 2	Order 3	Order 4
PCI Slot 1	INT B#	INT C#	INT D#	INT A#
PCI Slot 2	INTC#	INT D#	INT A#	INT B#
PCI Slot 3	INT D#	INT A#	INT B#	INT C#

Chapter 5 86

FRU (Field Replaceable Unit) List

This chapter gives you the FRU (Field Replaceable Unit) listing in global configurations of Aspire 3300S. Refer to this chapter whenever ordering for parts to repair or for RMA (Return Merchandise Authorization).

IMPORTANT: Please note WHEN ORDERING FRU PARTS, that you should check the most up-to-date information available on your regional web or channel. For whatever reasons a part number change is made, it will not be noted in the printed Service Guide. For ACER-AUTHORIZED SERVICE PROVIDERS, your Acer office may have a DIFFERENT part number code to those given in the FRU list of this printed Service Guide. You MUST use the local FRU list provided by your regional Acer office to order FRU parts for repair and service of customer machines.

NOTE: To scrap or to return the defective parts, you should follow the local government ordinance or regulations on how best to dispose it, or follow the rules set by your regional Acer office on how to return it.

NOTE: The number indicates the location shown on exploded diagram or "NS" indicates "Not shown" on it.

Model Definition and Configuration

The Acer Aspire 3300S Model No. Define:

1. Trade Mark:

2. Brand Name: Acer

3. Product Name: Acer Aspire 3300S

Appendix A 96

97 Appendix A

Test Compatible Components

This computer's compatibility is tested and verified by Acer's internal testing department. All of its system functions are tested under Windows XP.

Refer to the following lists for components, adapter cards, and peripherals which have passed these tests. Regarding configuration, combination and test procedures, please refer to the Aspire 3300S Compatibility Test Report released by the Acer Desktop System Testing Department.

Microsoft Windows XP Environment Test

Online Support Information

This section describes online technical support services available to help you repair your Acer Systems.

If you are a distributor, dealer, ASP or TPM, please refer your technical queries to your local Acer branch office. Acer Branch Offices and Regional Business Units may access our website. However some information sources will require a user i.d. and password. These can be obtained directly from Acer CSD Taiwan.

Acer's Website offers you convenient and valuable support resources whenever you need them.

In the Technical Information section you can download information on all of Acer's Notebook, Desktop and Server models including:

	Service guides
	User's manuals
	Training materials
	Main manuals
	Bios updates
	Software utilities
	Spare parts lists
	Chips
	TABs (Technical Announcement Bulletin)
For these patential n	ourposes, we have included an Acrobat File to facilitate the problem-free downloading of our naterial.
Also conta	ained on this website are:
	Detailed information on Acer's International Traveler's Warranty (ITW)
	Returned material authorization procedures
	An overview of all the support services we offer, accompanied by a list of telephone, fax and email contacts for all your technical queries.
147	and the transfer of the contract of the contra

We are always looking for ways to optimize and improve our services, so if you have any suggestions or comments, please do not hesitate to communicate these to us.
